

ALAN MOUNIR AL HAKIM

Beirut, Lebanon | +961 71 558 810 | alanhakim491@gmail.com | Lebanese & US Citizen
Availability: Immediate

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with experience building production-grade web, mobile, and enterprise systems.
Strong background in system architecture, secure backend design, and relational data modeling.
Proven ability to translate complex business logic into scalable, maintainable technical solutions across healthcare, e-commerce, and industrial domains.

TECHNICAL SKILLS

Core Engineering: System Architecture, API Design, Database Modeling, RBAC, Zero-Trust Security

Frontend: Angular, React Native, TypeScript, JavaScript (ES6+), SCSS, Tailwind CSS

Backend: NestJS, Node.js, Laravel, PHP, REST APIs

Databases: PostgreSQL, MySQL, Prisma ORM, pgvector

Infrastructure & Tools: Docker, Nginx, Cloudflare, Git, Linux, pnpm/npm

AI & Data: Retrieval-Augmented Generation (RAG), Embeddings, LLM Integration

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Software Engineer | Remote

Nov 2025 – Present

- Architected and delivered production-grade web and enterprise systems using Angular, NestJS, PostgreSQL, Prisma, Docker, and Nginx.
- Designed scalable relational data models and implemented type-safe APIs with Prisma ORM.
- Implemented role-based access control (RBAC) and Zero-Trust security architectures.
- Led full software development lifecycle from requirements gathering to deployment.

Key Project: Hakim Co Company Software

- Built a custom enterprise management platform for a chemical/system house company.
- Developed automated inventory and formulation engines converting raw materials into finished products.
- Implemented accounting, credit/debit tracking, stock thresholds, and cost-per-unit calculations.
- Engineered formulation calculators to estimate viscosity, OH number, reactivity index, and working ratios.
- Designed batch production workflows with atomic inventory deduction and full traceability.
- Implemented formulation versioning, cost history, and audit logging for compliance and accountability.
- Integrated AI-assisted formulation copilot using Retrieval-Augmented Generation (RAG) over internal formulation, batch, and material data to support constrained blend optimization and troubleshooting.
- Built AI decision-support features for cost reduction, viscosity targeting, and reaction profile analysis, with chemist approval workflows and full audit trails.
- Secured the system using RBAC and Zero-Trust networking behind Nginx reverse proxy.

Key Project: E-commerce Website

- Developed a full-stack e-commerce platform with secure authentication and role-based admin dashboard.
- Implemented full shopping flow including cart management, checkout, and order processing.
- Integrated online payment processing and secure transaction handling.
- Built order lifecycle management with status tracking and fulfillment tooling.
- Developed REST APIs using NestJS with PostgreSQL and Prisma ORM.
- Implemented responsive UI using Angular 21, SCSS, and Tailwind CSS.
- Containerized the application using Docker for deployment consistency.

XTND – Full-Stack Software Engineer Intern | Remote

Nov 2025 – Present

- Developed a cross-platform healthcare mobile application using React Native.
- Designed backend services using Laravel (PHP) for clinic onboarding, scheduling, and patient records.
- Architected relational MySQL schemas for sensitive healthcare data.
- Built real-time dashboards and integrated speech-to-text AI features for medical charting.

EDUCATION

BSc in Pharmacy (Academic Hiatus) – Lebanese University | 2024 – 2025

BSc in Chemistry – American University of Beirut (AUB) | 2019 – 2022

International Baccalaureate (IB) – International College | 2019

CERTIFICATIONS

CS50x: Introduction to Computer Science – Harvard University – 2026

LANGUAGES

English: Native | Arabic: Native | French: Intermediate
